

Walkthrough record — Fixed Assets

FX-02 · Assets are capitalised with correct useful lives and start dates

Fixed Assets — Project Accounting — Fixed Assets · Control owner S. Iyer · Companies: Altura Solar Pvt Ltd, Altura Wind Pvt Ltd

1. Scope of the walkthrough

This control addresses the risk that Fixed Assets misstated — additions, movements or reconciliations not controlled (ASO/FIX/R001), supporting the accuracy and existence / occurrence assertions over asset capitalisations.

Transaction traced end to end: capitalisation CPT-26-101, at Altura Solar Pvt Ltd. Walkthrough held on 18 Mar 2026; attendees S. Iyer, T. Das (Asset Accounting Lead), A. Mehta (auditor).

2. What we saw

The control is performed by S. Iyer (Project Accounting — Fixed Assets) each month, before the ledger closes: the team checks the useful life and capitalisation date of each asset against the commissioning certificate before the asset is settled.

Step 1 — Project Accounting receives the commissioning certificate. Observed and agreed to the system record.

Step 2 — The asset class sets the useful life from the group policy table. Observed and agreed to the system record.

Step 3 — The capitalisation date is checked to the certificate date. Observed and agreed to the system record.

Step 4 — The settlement (AIAB/AIBU) is posted after review. Observed and agreed to the system record.

3. Precision

Tolerance: nil on useful life; the start date must equal the commissioning date.

4. Segregation confirmed

The review is done by the Asset Accounting Lead, independent of the project team. Confirmed by inspecting the role assignment in SAP S/4HANA (FI-AA).

5. Exceptions

Any exception — a life or date that differs from policy — is held before settlement and escalated to the Financial Controller.

No exception arose on the transaction traced.

6. Conclusion

The control is implemented as described. Screenshots and the SAP audit trail for the traced transaction are retained with this record.
