

Process narrative — Fixed Assets

FX-03 · Depreciation run is reviewed against the asset register monthly

Fixed Assets — Project Accounting — Fixed Assets · Control owner S. Iyer · Companies: Altura Solar Pvt Ltd, Altura Wind Pvt Ltd

1. Purpose and scope

This control addresses the risk that Fixed Assets misstated — additions, movements or reconciliations not controlled (ASO/FIX/R001), supporting the accuracy and existence / occurrence assertions over depreciation runs.

It applies to Altura Solar Pvt Ltd, Altura Wind Pvt Ltd and is run in SAP S/4HANA (FI-AA).

2. How the control works

The control is performed by S. Iyer (Project Accounting — Fixed Assets) each month, before the ledger closes: the team reviews the monthly depreciation run against the asset register before the period is closed.

- a) The depreciation run (AFAB) is executed in test mode.
- b) The charge is compared to the register and to the prior month.
- c) Movements are explained by additions and disposals.
- d) The run is posted after sign-off.

3. Precision

Tolerance: month-on-month movement above 5% or Rs 25 lakh must be explained.

4. Who does what

The review is done by the Financial Controller, independent of the asset accountant who runs depreciation. Approvals are given under the Altura delegation of authority (DoA v7, effective 1 Apr 2025).

5. Exceptions

Any exception — an unexplained movement — is held and the run is not posted until it is resolved.

6. Evidence

Each occurrence is evidenced by dated sign-off; the SAP audit trail and the signed documents are retained for eight years in the Altura evidence store.

Process owner: G. Pillai (Financial Controller) · Version 3.2 · Approved 12 Apr 2026
