

## Process narrative — Procure to Pay

PX-01 · Procure to Pay transactions are approved before processing

Procure to Pay — Shared Services — Procurement & AP · Control owner S. Iyer · Companies: Altura Infra Holdings Ltd, Altura Solar Pvt Ltd

---

### 1. Purpose and scope

This control addresses the risk that Procure to Pay misstated — additions, movements or reconciliations not controlled (AIH/P2P/R001), supporting the accuracy and existence / occurrence assertions over purchase requisitions and orders.

It applies to Altura Infra Holdings Ltd, Altura Solar Pvt Ltd and is run in SAP S/4HANA (MM / FI-AP).

### 2. How the control works

The control is performed by S. Iyer (Shared Services — Procurement & AP) each month, before the ledger closes: the team approves each purchase order in SAP against the delegation of authority before it is released to the vendor.

- a) The requester raises a purchase requisition in SAP (ME51N).
- b) Procurement converts it to a purchase order with the quoted price.
- c) The release strategy routes the order to the approver set by the delegation of authority.
- d) The order is released to the vendor only after approval.

### 3. Precision

Tolerance: nil. Every order is approved before release; the approver level steps up at Rs 10 lakh, Rs 1 crore and Rs 10 crore.

### 4. Who does what

The approver is independent of the requester; SAP release codes are not assigned to anyone who can create orders.

Approvals are given under the Altura delegation of authority (DoA v7, effective 1 Apr 2025).

### 5. Exceptions

Any exception — an order released without approval or above the approver's level — is held and escalated to the Head of Procurement.

### 6. Evidence

Each occurrence is evidenced by dated sign-off; the SAP audit trail and the signed documents are retained for eight years in the Altura evidence store.

Process owner: R. Kulkarni (Head of Procurement) · Version 3.2 · Approved 12 Apr 2026
