

Walkthrough record — Treasury

T-03 · New payee setup independently verified

Treasury — Group Treasury · Control owner A. Verma · Companies: Altura Infra Holdings Ltd, Altura Solar Pvt Ltd, Altura Wind Pvt Ltd, Altura Smart Metering Pvt Ltd

1. Scope of the walkthrough

This control addresses the risk that payments released without dual authorisation or to unverified payees (AIH/TRY/R001), supporting the accuracy and existence / occurrence assertions over new payee set-ups.

Transaction traced end to end: payee request PAYEE-2026-0114, at Altura Infra Holdings Ltd. Walkthrough held on 18 Mar 2026; attendees A. Verma, N. Bhatt (Treasury Controller), A. Mehta (auditor).

2. What we saw

The control is performed by A. Verma (Group Treasury) each month, before the ledger closes: the team verifies each new payee and each bank-detail change by calling back the payee on a number taken from an independent source.

Step 1 — The requester raises the payee request in SAP MDG with supporting documents. Observed and agreed to the system record.

Step 2 — The Master Data team calls the payee back on the number held on file, not the one on the request. Observed and agreed to the system record.

Step 3 — Bank details are confirmed against a cancelled cheque or bank letter. Observed and agreed to the system record.

Step 4 — The payee is activated only after the call-back is recorded. Observed and agreed to the system record.

3. Precision

Tolerance: nil. No payee is activated without a completed call-back, whatever the first payment value.

4. Segregation confirmed

The call-back is made by the Master Data team, independent of the requester and of anyone who can release payments. Confirmed by inspecting the role assignment in SAP S/4HANA (FI-BL).

5. Exceptions

Any exception — a call-back that fails or details that differ — is held, the payee stays blocked, and the case is escalated to the Treasury Controller. No exception arose on the transaction traced.

6. Conclusion

The control is implemented as described. Screenshots and the SAP audit trail for the traced transaction are retained with this record.
