FX-02 · Assets are capitalised with correct useful lives and start dates

Fixed Assets — Project Accounting — Fixed Assets · Control owner S. Iyer · Companies: Altura Solar Pvt Ltd, Altura Wind Pvt Ltd

1. What the configuration controls

This control addresses the risk that Fixed Assets misstated — additions, movements or reconciliations not controlled (ASO/FIX/R001), supporting the accuracy and existence / occurrence assertions over asset capitalisations.

The control is performed by S. Iyer (Project Accounting — Fixed Assets) each month, before the ledger closes: the team checks the useful life and capitalisation date of each asset against the commissioning certificate before the asset is settled.

Setting	Value
Asset classes	1100 Solar plant · 1200 Wind turbines · 1300 Transmission
Useful life source	Group policy table ZAA_LIFE
Life override	Blocked (field status group 0001)
Capitalisation date	Defaulted from commissioning date field
Settlement	AIBU after review

2. Precision

Tolerance: nil on useful life; the start date must equal the commissioning date.

3. Segregation

The review is done by the Asset Accounting Lead, independent of the project team.

4. Exceptions

Any exception — a life or date that differs from policy — is held before settlement and escalated to the Financial Controller.

5. Change history

Configuration changes go through ServiceNow change control; the SAP table-change audit trail (SCU3) is retained.
