G-05 · Emergency changes reviewed post-implementation

IT General Controls — Group IT — SAP Basis & Security · Control owner V. Menon · Companies: Altura Infra Holdings Ltd

1. What the configuration controls

This control addresses the risk that unauthorised or untested changes reach production (AIH/ITG/R002), supporting the accuracy and existence / occurrence assertions over emergency changes.

The control is performed by V. Menon (Group IT — SAP Basis & Security) each month, before the ledger closes: the team reviews every emergency change after it is implemented and confirms it was needed and approved.

Setting	Value
System	SAP S/4HANA, ServiceNow and SAP GRC Access Control
Configured control	reviews every emergency change after it is implemented and confirms it was needed and approved
Owner of the setting	J. Mathew (IT Compliance Lead)
Change route	ServiceNow change with CAB approval
Last reviewed	28 Feb 2026

2. Precision

Tolerance: every emergency change is reviewed within 2 business days.

3. Segregation

The review is done by the change manager, independent of the person who made the change.

4. Exceptions

Any exception — a change not reviewed in time — is escalated to the Group CIO.

5. Change history

Configuration changes go through ServiceNow change control; the SAP table-change audit trail (SCU3) is retained.
