

System configuration export

O-02 · Sales invoices priced from the approved price master

Order to Cash — Commercial Finance — Billing & Credit · Control owner P. Sharma · Companies: Altura Infra Holdings Ltd

1. What the configuration controls

This control addresses the risk that customers billed at incorrect prices or terms (AIH/O2C/R002), supporting the accuracy and existence / occurrence assertions over sales invoice prices.

The control is performed by P. Sharma (Commercial Finance — Billing & Credit) on every transaction, as it is processed: the team prices each sales invoice automatically from the approved price master in SAP SD.

Setting	Value
Pricing procedure	ZALT01
Condition type	ZPR0 (price master)
Manual override	Not allowed (D)
Price master change	VK11 via approval workflow
Change history	CDHDR/CDPOS on

2. Precision

Tolerance: zero — manual price changes on the invoice are not allowed.

3. Segregation

Price master changes are approved by Commercial Finance, independent of the billing team.

4. Exceptions

Any exception — an invoice priced off-master — is held and escalated to the Credit Controller.

5. Change history

Configuration changes go through ServiceNow change control; the SAP table-change audit trail (SCU3) is retained.
