

Walkthrough record — Procure to Pay

PX-01 · Procure to Pay transactions are approved before processing

Procure to Pay — Shared Services — Procurement & AP · Control owner S. Iyer · Companies: Altura Infra Holdings Ltd, Altura Solar Pvt Ltd

1. Scope of the walkthrough

This control addresses the risk that Procure to Pay misstated — additions, movements or reconciliations not controlled (AIH/P2P/R001), supporting the accuracy and existence / occurrence assertions over purchase requisitions and orders.

Transaction traced end to end: purchase order 4500012840, at Altura Infra Holdings Ltd. Walkthrough held on 18 Mar 2026; attendees S. Iyer, M. Joshi (AP Controller), A. Mehta (auditor).

2. What we saw

The control is performed by S. Iyer (Shared Services — Procurement & AP) each month, before the ledger closes: the team approves each purchase order in SAP against the delegation of authority before it is released to the vendor.

Step 1 — The requester raises a purchase requisition in SAP (ME51N). Observed and agreed to the system record.

Step 2 — Procurement converts it to a purchase order with the quoted price. Observed and agreed to the system record.

Step 3 — The release strategy routes the order to the approver set by the delegation of authority. Observed and agreed to the system record.

Step 4 — The order is released to the vendor only after approval. Observed and agreed to the system record.

3. Precision

Tolerance: nil. Every order is approved before release; the approver level steps up at Rs 10 lakh, Rs 1 crore and Rs 10 crore.

4. Segregation confirmed

The approver is independent of the requester; SAP release codes are not assigned to anyone who can create orders.

Confirmed by inspecting the role assignment in SAP S/4HANA (MM / FI-AP).

5. Exceptions

Any exception — an order released without approval or above the approver's level — is held and escalated to the Head of Procurement. No exception arose on the transaction traced.

6. Conclusion

The control is implemented as described. Screenshots and the SAP audit trail for the traced transaction are retained with this record.
