

Process narrative — Procure to Pay

PX-03 · Procure to Pay master data changes are independently reviewed

Procure to Pay — Shared Services — Procurement & AP · Control owner S. Iyer · Companies: Altura Infra Holdings Ltd, Altura Solar Pvt Ltd

1. Purpose and scope

This control addresses the risk that Procure to Pay misstated — additions, movements or reconciliations not controlled (AIH/P2P/R001), supporting the accuracy and existence / occurrence assertions over vendor master data changes.

It applies to Altura Infra Holdings Ltd, Altura Solar Pvt Ltd and is run in SAP S/4HANA (MM / FI-AP).

2. How the control works

The control is performed by S. Iyer (Shared Services — Procurement & AP) each month, before the ledger closes: the team reviews every vendor master change against its supporting documents in SAP MDG before the change is activated.

- a) The requester submits the change in SAP MDG with supporting documents.
- b) The Master Data team checks the change against the documents.
- c) Bank detail changes are called back on a number held on file.
- d) The change is activated after approval.

3. Precision

Tolerance: nil. Every change is reviewed; no change is activated without approval.

4. Who does what

The reviewer is independent of the requester and has no access to post invoices or release payments. Approvals are given under the Altura delegation of authority (DoA v7, effective 1 Apr 2025).

5. Exceptions

Any exception — missing support or a failed call-back — is held and escalated to the AP Controller.

6. Evidence

Each occurrence is evidenced by dated sign-off; the SAP audit trail and the signed documents are retained for eight years in the Altura evidence store.

Process owner: R. Kulkarni (Head of Procurement) · Version 3.2 · Approved 12 Apr 2026
