

System configuration export

G-02 · User access granted via approved request

IT General Controls — Group IT — SAP Basis & Security · Control owner V. Menon · Companies: Altura Infra Holdings Ltd

1. What the configuration controls

This control addresses the risk that unauthorised or excessive access to financial systems (AIH/ITG/R001), supporting the accuracy and existence / occurrence assertions over user access requests.

The control is performed by V. Menon (Group IT — SAP Basis & Security) on every transaction, as it is processed: the team grants SAP access only through an approved request in SAP GRC Access Control.

Setting	Value
GRC workflow	SAP_GRAC_ACCESS_REQUEST
Approval path	Manager !' role owner
Conflict check	On, before approval
Self-approval	Blocked
Provisioning	Automatic after approval

2. Precision

Tolerance: zero — access cannot be provisioned without an approved request.

3. Segregation

Role owners are independent of the requesters; GRC blocks self-approval.

4. Exceptions

Any exception — a conflict — is held for the role owner and escalated to IT Compliance.

5. Change history

Configuration changes go through ServiceNow change control; the SAP table-change audit trail (SCU3) is retained.
