

## Control description

G-04 · Program changes tested and approved before deploy

IT General Controls — Group IT — SAP Basis &amp; Security · Control owner V. Menon · Companies: Altura Infra Holdings Ltd

|                                  |                                                                                                                                                                                                |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Control ID</b>                | G-04 (AIH/ITG/R002/C001)                                                                                                                                                                       |
| <b>Control statement</b>         | Program changes tested and approved before deploy.                                                                                                                                             |
| <b>Risk addressed</b>            | This control addresses the risk that unauthorised or untested changes reach production (AIH/ITG/R002), supporting the accuracy and existence / occurrence assertions over program changes.     |
| <b>Nature / type / frequency</b> | Manual · Preventive · Monthly                                                                                                                                                                  |
| <b>How it is performed</b>       | The control is performed by V. Menon (Group IT — SAP Basis & Security) each month, before the ledger closes: the team tests and approves every SAP transport before it is moved to production. |
| <b>Precision</b>                 | Tolerance: nil — no transport moves to production without test sign-off and CAB approval.                                                                                                      |
| <b>Segregation</b>               | Transports are imported by Basis, independent of the developer who built the change.                                                                                                           |
| <b>Exceptions</b>                | Any exception — a transport moved without approval — is escalated to the Group CIO.                                                                                                            |
| <b>Evidence</b>                  | Dated sign-off on each occurrence; the SAP audit trail is retained for eight years.                                                                                                            |
| <b>System</b>                    | SAP S/4HANA, ServiceNow and SAP GRC Access Control                                                                                                                                             |
| <b>Companies</b>                 | Altura Infra Holdings Ltd                                                                                                                                                                      |
| <b>Control owner</b>             | V. Menon · reviewer J. Mathew (IT Compliance Lead)                                                                                                                                             |

Approved by B. Rao (Group CIO) on 12 Apr 2026 · RACM row AIH/ITG/R002
