

Walkthrough record — IT General Controls

G-04 · Program changes tested and approved before deploy

IT General Controls — Group IT — SAP Basis & Security · Control owner V. Menon · Companies: Altura Infra Holdings Ltd

1. Scope of the walkthrough

This control addresses the risk that unauthorised or untested changes reach production (AIH/ITG/R002), supporting the accuracy and existence / occurrence assertions over program changes.

Transaction traced end to end: change CHG0031184, at Altura Infra Holdings Ltd. Walkthrough held on 18 Mar 2026; attendees V. Menon, J. Mathew (IT Compliance Lead), A. Mehta (auditor).

2. What we saw

The control is performed by V. Menon (Group IT — SAP Basis & Security) each month, before the ledger closes: the team tests and approves every SAP transport before it is moved to production.

Step 1 — The developer raises the change in ServiceNow. Observed and agreed to the system record.

Step 2 — The change is tested in QA and the test is signed off by the business. Observed and agreed to the system record.

Step 3 — The Change Advisory Board approves the move. Observed and agreed to the system record.

Step 4 — Basis imports the transport to production. Observed and agreed to the system record.

3. Precision

Tolerance: nil — no transport moves to production without test sign-off and CAB approval.

4. Segregation confirmed

Transports are imported by Basis, independent of the developer who built the change. Confirmed by inspecting the role assignment in SAP S/4HANA.

5. Exceptions

Any exception — a transport moved without approval — is escalated to the Group CIO. No exception arose on the transaction traced.

6. Conclusion

The control is implemented as described. Screenshots and the SAP audit trail for the traced transaction are retained with this record.
