

C065 — Walkthrough

Altura Infra Holdings Limited · FY 2025-26 (1 April 2025 – 31 March 2026) · Procure to Pay · Invoice validation

Control	Invoice validation before posting
Walked on	2026-04-10
Performed by	A. Jain, Audit Senior
Attended by	AP Manager, Head of Accounts Payable
Transaction walked	INV-2631013 · PO-264107 · Tata Power Solar Systems Ltd

What we did

We selected one transaction from the period and followed it from the raising of the purchase order through to the release of payment, observing the control operate and inspecting the evidence it leaves at each point. The transaction walked was invoice INV-2631013 for Tata Power Solar Systems Ltd, value INR 40.12 lakh, against purchase order PO-264107 and goods receipt note GRN-268205.

What we observed, against each design check

1. The reviewer is someone other than the person who keyed the invoice

We inspected the workflow log for the sampled invoice. It was keyed by ap.menon and approved by ap.iyer. We confirmed with IT Applications that the workflow step excludes the keying user, and observed the system refuse a self-approval in the test client.

Conclusion: operating as designed

2. The reviewer has the authority to approve the value of the invoice

The reviewer holds an approval limit of INR 50 lakh per the delegation-of-authority matrix. The sampled invoice was well inside that limit.

Conclusion: operating as designed

3. The validation is evidenced before the invoice is posted, not after

The workflow timestamp for approval precedes the posting document timestamp by 41 minutes. We agreed both to the SAP audit trail.

Conclusion: operating as designed

Conclusion

The control is designed effectively to address the risk. The walkthrough confirmed that each design check operates as described, and that the control leaves sufficient evidence for a reviewer to establish that it ran.
